Osborne Clarke's 2022 Future of Financial Services Week

26 January – 3 February 2022

Osborne Clarke

Speaking with you today on...

The Future of IT Procurement in Financial Services

Mark Taylor Partner United Kingdom

T +44 20 7105 7640 mark.taylor@osborneclarke.com

Continued and increasing use of IT and FinTech solutions within Financial Services sector means continued and increasing regulatory scrutiny.

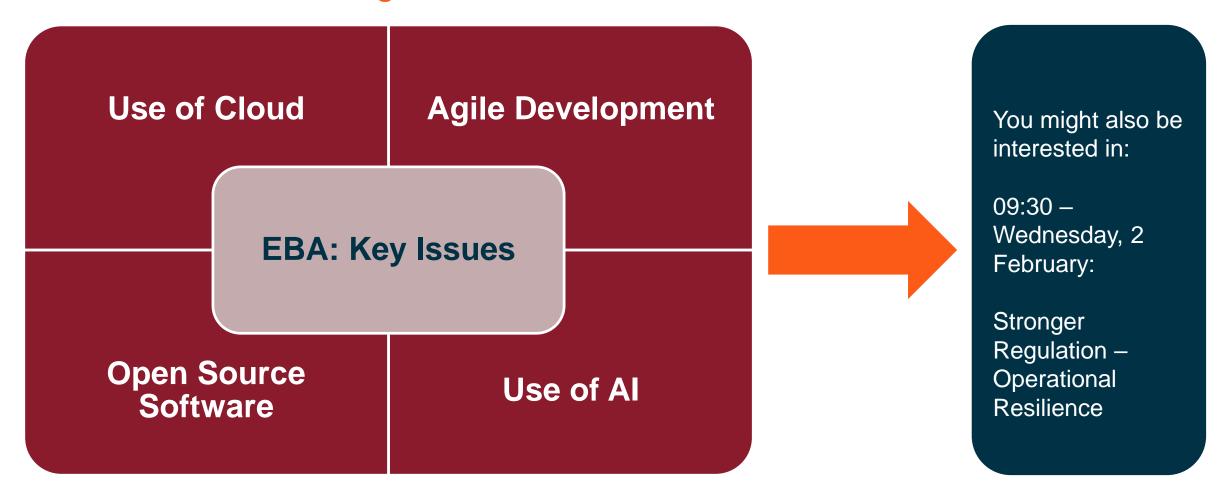

Cathy Han Associate Director United Kingdom

T +44 20 7105 7390 cathy.han@osborneclarke.com Not new for the sector – for example, UK's SYSC rules, FCA Principles for Business, PRA Fundamental Rules. However, regulatory trends are becoming more intrusive and prescriptive.

Leading to greater complexities for procurement and more complex regulatory landscapes and supply chain considerations.

What we'll be covering

EBA Outsourcing Guidelines – Some Key Problem Areas (1)

Generally increased compliance burden

More expansive, prescriptive outsourcing regime poses practical issues, and likely to continue this way Change in contracting required – likely consequential changes to providers' own procedures, policies and processes

Specific topics and provisions now need to be included when procuring outsourced solution

Access and Audit Rights Key issue for providers – set expectations at outset of procurement, as may affect pricing/commercials offered Difference between critical and non-critical functions – risk based approach to degree of audit rights requested for non-critical functions

But consider if a function could become critical over time

EBA Outsourcing Guidelines – Some Key Problem Areas (2)

Contractual Requirements

Prescriptive approach in things to include in contracts – need internal processes/controls to ensure captured through procurement and contracting

For example, specific audit rights, termination rights and cooperation rights Consider building into procurement requirements (RFP) or template documentation

Subcontracting

More restrictive – rights of consent, rights to object, etc. will need to be imposed on relevant providers Outline as part of procurement exercise from outset to ensure provider can comply (and if comes at a price)

What follow-on rights/remedies should there be – e.g. if FI objects to a subcontracting?

Use of Cloud – Some Key Considerations

Cloud increasingly popular, but aspects making it beneficial can be seen as risk areas from regulatory perspective.

More than most markets, cloud providers often have standard terms – so providers into FS space likely to develop own amended terms.

Agile Development Methodologies – increased popularity

- Drive for innovation means more development under agile methodologies
- What is agile umbrella term for iterative and incremental approach
- Tension with regulatory approach for clear contracting
- Balance between agility and appropriate risk management

Agree exact methodology Risk assessment at outset of development process Parameters for reconsideration of

assessments/governance

6

Use of Open Source Software

Growing use of OSS by Financial Institutions – but, important to understand operational risks and have processes/policies in place to protect and mitigate risks.

Identify objectives for use of OSS to set parameters for use

Authorisation process to manage selection, adoption & use

Review code – licence requirements, vulnerabilities and operational impacts

Response processes for if and when issue arises

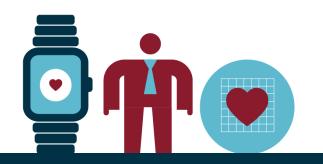

Accurate cataloguing of approved OSS and where/how used

Use of AI – Some Key Thoughts

- Use in FS sector increasing

 cryptocurrency, roboadvice, machine learning fraud tools etc.
- Greater regulation likely: EU already published proposal in April 2021

- EU regulation not specific to FS sector, but will have future impacts.
- Tiered system of "high risk" uses have greatest obligations – use in FS sector likely to fall under this category.
- UK may develop own approach, but likely to be broadly similar.

- Currently, no specific Al regulation, but existing regulatory framework will capture considerations.
- Tension with control/governance of risk?
- Accountability/ethics?

In Conclusion...

- Overall theme continued trajectory of more invasive and prescriptive regulatory landscape.
- Some key issues to focus on practically:
 - Greater focus on firms making appropriate assessments: need suitable outsourcing policies to evidence full consideration of proposed services
 - Prescriptive requirements and contracting: must ensure procurement and compliance teams understand and build in requirements from outset of service acquisition
- Potential for divergence in requirements between UK and EU regimes.

Any questions?

About Osborne Clarke

Our global connections and 'best friends'

Through a network of 'best friends' we extend our reach across the globe, particularly in North America, EMEA & Asia Pacific. We have worked closely with like-minded firms in over 100 countries. We'll find the right local partner for you and wherever that may be, we will make sure that you receive the Osborne Clarke level of service.

Osborne Clarke is the business name for an international legal practice and its associated businesses.
